OAG Developer Portal · Quick Start Guide

Cathay Hackathon 2026 · developers.oag.com

The OAG Developer Portal gives Cathay Hackathon 2026 participants free, self-service access to live aviation data. Register in minutes, subscribe to the APIs relevant to your challenge, and start querying — no infrastructure setup required.

How to Get Started

1 **Create your account**

Go to developers.oag.com and click Sign In.
Enter your email address. A 6-digit code will be sent to your address for verification.
Enter your full name and university/company name, click Continue and create a password. Click Continue to proceed.
You now have portal access.

2 **Browse available APIs**

Sign in and click APIs in the top navigation. You will see all APIs available on the platform.

3 **Free trial to your chosen API(s)**

Click **"Try it"** on each API you need. Access is provisioned immediately.
Your API key and usage statistics appear under "Subscriptions" tab (top right). Use this key in all API requests.

4 **Start querying**

Your API keys are automatically filled in the request header of your chosen API. Feel free to begin querying. See API reference links for parameters and response formats.

Available APIs & Free Tier Limits

Flight Info API

1,000 req / 30 days · 10 results/req

Live and historical flight schedules, seats, tonnage, status, delays, cancellations and more. Suitable for schedule planning, capacity analysis, disruption management and on-time performance tracking.
Response layout & parameters →

Quick Tips — Flight Info API

Content parameter:

(blank)	`schedules only`
STATUS	`latest flight status`
STATUSDETAILED	`full status updates throughout the flight`
SEATS	`seat capacity for scheduled flights`

Recommended defaults:

CodeType	`IATA`
Codeshare	`OPERATING(excludes codeshare duplicates)`

Example query:

CX and SQ flights from HKG to SIN on 15 Nov, with seat data:

```
CarrierCode: CX,SQ · DepartureAirport: HKG · ArrivalAirport: SIN
DepartureDateTime: 2026-11-15 Content: SEATS
CodeType: IATA · Codeshare: OPERATING
```

Mandatory parameter:

`DepartureDateTime/ArrivalDateTime are` **`mandatory`** `parameters, alongside with either CarrierCode or DepartureAirport/ArrivalAirport.`

Flight Info Connections API

Quota shared with Flight Info API

Global connecting flight itineraries across all airline combinations. Ideal for journey planners and travel accessibility solutions.
Response layout & descriptions →

Master Data API

100 req / 30 days · 1 result/req

Reference data: airports, airlines, aircraft types, etc. Use to enrich and validate data from other APIs.
Response layout & descriptions →

Note: Limits are per API and reset every 30 days.
